Instructions (all dimensions in inches)

Paste or otherwise attach sheets one and two together, so that the hash marks match up with one another. You may need to trim one of the sheets in order to avoid a blank strip through the map disc if your printer doesn't print all the way to the edge. Photocopy the disc onto an 11x17 or suitably large sheet of paper.

Then use a compass to draw a circle around the map disc, using the hash marks as a guide. Cut along this circle. Laminate the disc and use a pivoting grommet to mate it to the center mask.

The center mask is put together from its two pieces in a similar way; the two vertical lines indicate where to cut—you should end up with an 11x11 square. The front mask is also put together from its two pieces, but it should be cut out as a 8.5-inch circle. This circle should be mated to the center mask using a pivoting grommet through the center of the front mask and the 8.5-inch hole in the center mask, as shown in the instructions in the main column.

Send e-mail to brian@isi.edu if you have any questions or comments.
